

GLASS AND GLASS FREEFORM

Let's face it, Glass is a niche product, but there remains a loyal niche group of customers who continue to prefer Glass and glass Hi-Index lenses for various reasons.

As fewer and fewer optical labs are able to produce glass lenses each year, Luzerne Optical recognizes the demand that still remains and continues to be one of the leading producers of plano and prescription glass eyewear in the United States.

Why do real Glass lenses continue to be in demand?

- * **Clarity** - Glass lenses with the highest abbe value of all materials offer superior clear vision, clarity and less distortion.
- * **Excellent Scratch Resistance** - Other materials just don't offer the same scratch resistance as glass.
- * **Incredible Durability** - More durable than other materials.
- * **Great Safety and Industrial Choice** - Great choice due to its chemical and heat resistance. Also, X-Ray glass available for those who work with X-Ray equipment.
- * **Wide Availability** - Available in clear, photogrey xtra, photobrown xtra, grey 3, brown 3, G15, Green 3, polarized, Hi-Index glass and X-ray. Lens style include SV, FT28, FT35, Round 22, trifocals, and Progressive lenses.

Did you know you can get Glass Freeform?

Luzerne Optical is one of the very few labs in the world that can produce Glass Freeform lenses. Are you tired of having to choose one of the two or three older design lenses still available when you need a glass progressive lens? Now you can get some of the latest technological designs in a glass progressive when you order one of our Freeform Glass choices from Luzerne Optical. You can now get clearer vision using a Freeform glass design instead of the older non Freeform styles. Freeform glass also give you more choices than just clear , pgx and pbx. With Freeform glass, you can also get those three mentioned along with Grey C, Brown C, G15, Green 3, Hi-Index, Xray, polarized and others.

We know you enjoy the great clarity and other benefits of freeform technology in other lens materials you use. Well, when you need SV or Progressives in glass, you can also have that same super clarity freeform lens. We have it!
