## POKER MIRROR COATING/POKER SHADES

**Poker Mirror** is a fashion-forward, functional thin film design that hides the eyes while allowing maximum light transmission in low light conditions. Poker Mirror is perfect for today's club circuit, casinos, A-list parties, or just looking fashionable.

Poker Mirror is available with a backside Anti-Reflective (AR) and super-premium hydrophobic/oleophobic topcoat.

It can be ordered as Standard Poker Mirror to allow maximum light transmission in low light conditions or as Poker Mirror Gray 80 for a darker lens that provides further concealment of the eyes. Some players may like one choice better than the other depending on the lighting in the room that they are playing in. It is really the player's preference. The Standard Poker Mirror will allow more light transmission to help you see better. The Poker Mirror Gray 80 has the same benefits, but with less light transmission and enhanced concealment of the eyes.

Used by professional poker players, authors, and enthusiasts, the Poker Mirror can give you the edge that you are looking for. As we all know, the eyes can be very revealing. In poker, reading the eyes can be the difference between winning and losing.

Poker Lenses can be obtained from any Eyecare professional ordering from Luzerne Optical Laboratories. They can be ordered as Plano (no Rx) or in almost any prescription lens design. They can be inserted into your favorite prescription frame or added to any Rx frame purchased from an Eyecare professional.

These poker lenses will help things look clearer at the poker table and the mirror coating will help block others trying to look at you and read your eyes. It also won't be as noticeable as you are observing others around the table.

If you are ready to up your game, Poker Mirror may be just what you are looking for!
