

FreeFocus[®] 3.0

Luzerne Optical is Proud to Introduce FreeFocus 3.0

FreeFocus 3.0 is the latest in our very successful line of FreeFocus designs.

An advanced freeform progressive lens designed to fit your patients varied lifestyles.

If you like our FreeFocus and FreeFocus HD , you will love the new FreeFocus 3.0

FreeFocus 3.0 takes into account the difference in Rx between the left and right eye using customized binocular calculations resulting in a smooth adaptation and wearer comfort. This new design offers very clear visual fields throughout the lens making it an outstanding all purpose progressive lens choice. This is a more balanced design for all needs giving the patient clear broad vision throughout the lens.

Add Range is 75 to 350 Add

Rx range is approximately -12.00 to +8.00 to -6.00 cylinder depending on the material. Minimum fitting height is 14mm and the fitting cross is 4 mm above the 180 line. FreeFocus 3.0 comes in both Fixed and Variable designs. The variable design allows for ease of fitting and dispensing and the computer software for the design will choose the correct corridor length based on the seg height.

This new design can be made in most materials and colors and is compatible with most of our in-house produced AR Coatings. An easy to adapt to design that makes a great alternative choice for other brand progressive non-adapts.

FreeFocus 3.0 has been released today and is now available at Luzerne Optical Laboratories, Ltd.
